# CONTINUING EDUCATION

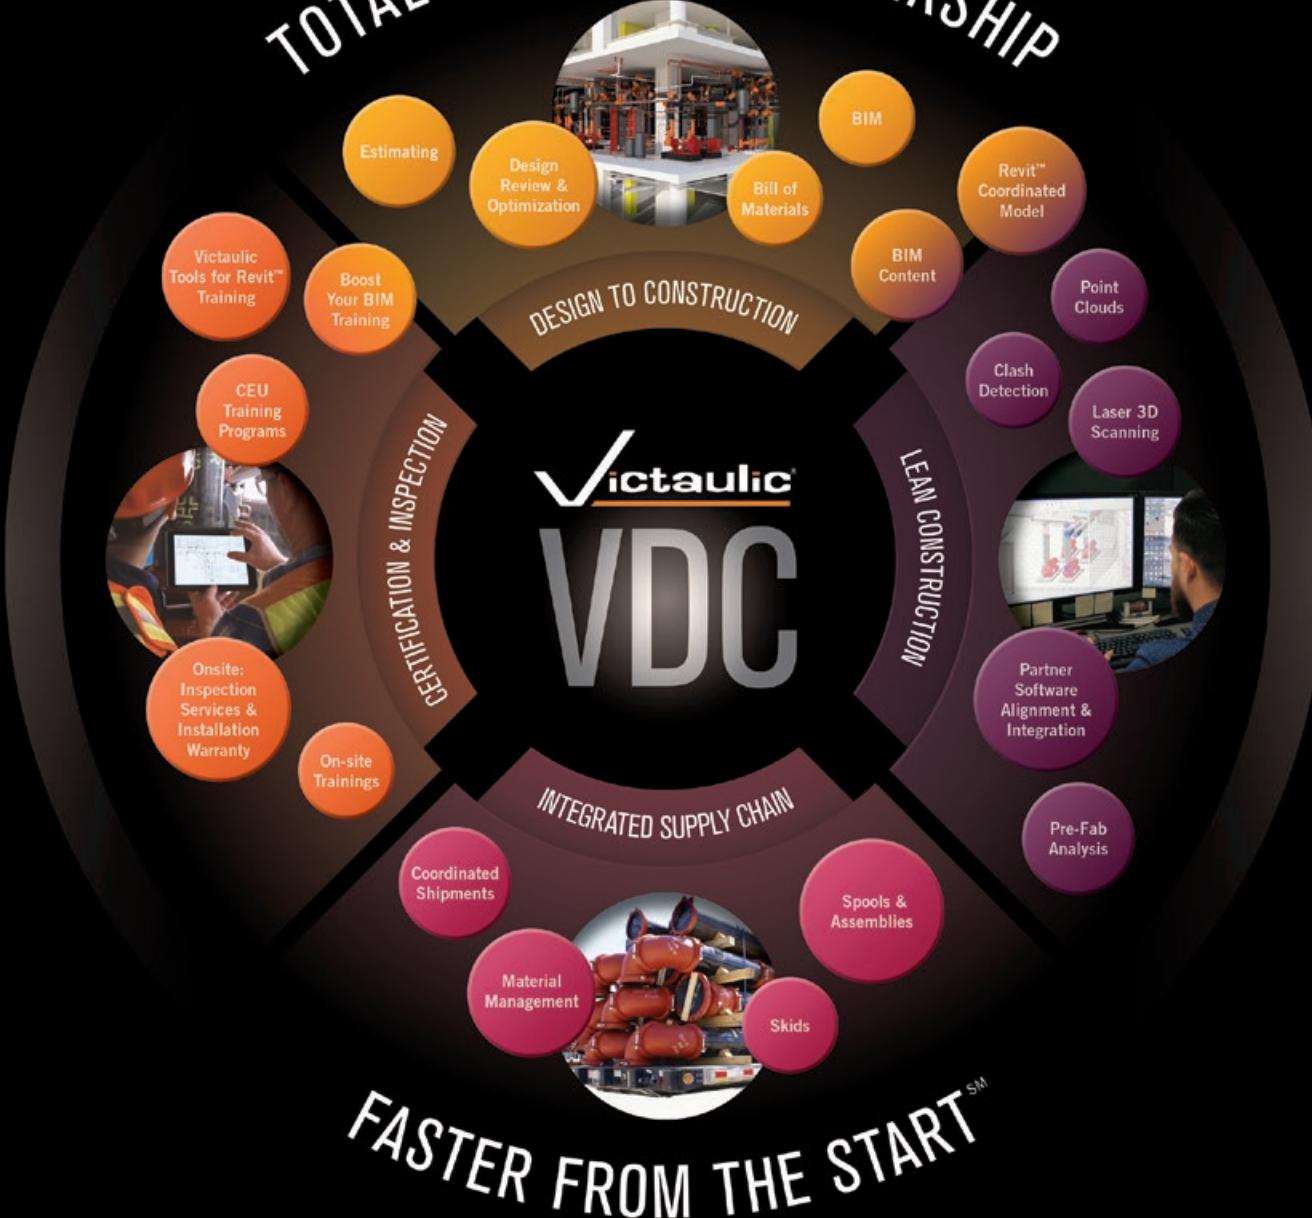

Victaulic offers a wide variety of continuing education courses. From one-hour seminars to full-day events, these courses provide education on key industry concepts and Victaulic® solutions. Continuing education courses are created for owners, engineers, contractors, the inspection community, and anyone seeking to expand their knowledge of Victaulic and the industry surrounding the pipe joining and flow control markets.

For more information on the Victaulic® University Continuing Education courses or to schedule your training, please contact your local sales representative or email us at: [VictaulicUniversity@victaulic.com](mailto:VictaulicUniversity@victaulic.com)

# THE VICTAULIC® DIFFERENCE

## GROOVED PIPE JOINING TECHNOLOGY

### How does it work?

The groove is cold formed or machined into the pipe end using a grooving tool. The coupling housings, fully surrounding a gasket, are assembled around two grooved pipe ends, and the key sections of the housings engage into the grooves. The bolts and nuts are tightened with a socket wrench or impact wrench.

### Types of grooved couplings

- **Flexible coupling** – allows for controlled linear and angular movement, which accommodates pipeline deflection as well as thermal expansion and contraction.
- **Rigid coupling** – does not allow for movement, similar to a flanged or welded joint.

At the core of all of the benefits that Victaulic® [solutions](#) bring to a project – such as productivity, safety, design flexibility and quality – are the unique features of our products.

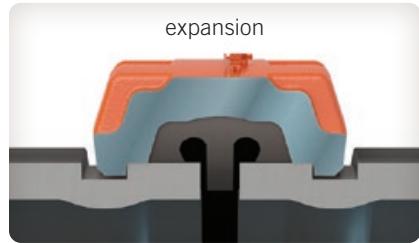

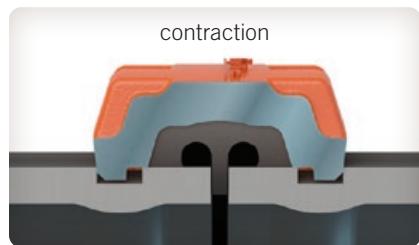

#### VICTAULIC GROOVED END PIPING SYSTEMS PROVIDE:

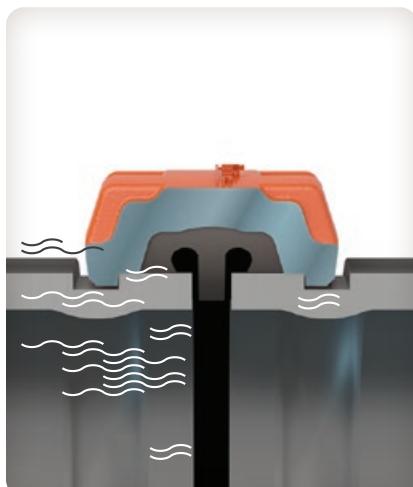

**Easy system maintenance and expansion** – through simple coupling disassembly that allows for easy access.

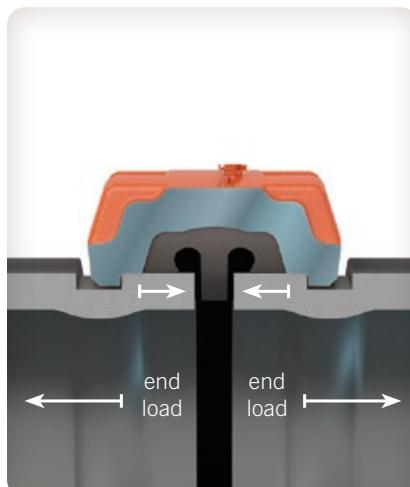

**Alignment ease** – through a design that allows for full rotation of the pipe and system components before tightening.

**Flexibility** – with the inherent axial movement and deflection properties of flexible couplings in a groove system. May be used to accommodate pipeline thermal expansion and contraction, misalignment and settlement, and seismic stresses.

**Noise and vibration attenuation** – by isolating the transference of vibration at each joint.

**Self restrained pipe joints** – couplings engage the pipe grooves to hold the pipes against full pressure thrust loads without the need for supplemental restraints.

**Rigidity** – with an angled bolt pad design that provides positive clamping of the pipe to resist torsional and flexural loads.

## Original Groove System (OGS)

The Victaulic® grooved piping system is the most versatile, economical, and reliable piping system available. Up to three times faster to install than a welded system, and more dependable than a threaded or flanged assembly, the Victaulic approach reduces risk and total installed cost. The system is designed for roll grooved or cut grooved standard pipe or roll grooved light wall pipe. Also, pipe end preparation is fast and easy. It can be done on the job site or in the fabrication shop with a variety of *Victaulic* grooving tools.

With the introduction of *Victaulic* Installation-Ready™ technology, the original groove system has evolved to a new level. Grooved couplings featuring this patented *Victaulic* technology install ten times faster than other pipe joining methods. Why is it different? Prior to *Victaulic* Installation-Ready technology, grooved coupling assembly

consisted of disassembling the coupling by removing the bolts and nuts, removing the gasket, fitting the gasket over the gap between two grooved pipe ends, positioning the housings around the gasket, and tightening down the bolts and nuts. Couplings featuring *Installation-Ready* technology come pre-assembled and are simply pushed onto a grooved pipe end, joined by a second grooved pipe end, and then the bolts and nuts are tightened down.

What previously required minutes, now takes only seconds.

**OS&Y Gate Valve****SERIES 771M**

[Download publication 08.45](#) for complete information

- Available as groove × groove or groove × flange
- For On/Off service only
- Sizes from 2½–12" | 73.0 mm–DN300
- Pressures up to 250 psi | 1725 kPa | 17 bar

**OS&Y Gate Valve****SERIES 371**

[Download publication 08.48](#) for complete information

- Conforms to AWWA C-509 requirements
- For On/Off service only
- Series 371 sizes from 2½–12" | 73.0 mm–DN300 available with Original Groove System (OGS) ends
- Series W371 sizes from 14–16" | DN350–DN400 available with Advance Groove System (AGS) ends, see pg. 34
- Pressures up to 250 psi | 1725 kPa | 17 bar

## Three Port Diverter

SERIES 723

[Download publication 08.13 for complete information](#)

- NACE MR-01-75 compliant, three-port ball valve with common bottom inlet for diverting flow 90° left or right
- Available without handle, with lever operator or gear operator
- Available in 2" | DN50
- Pressures up to 600 psi | 4137 kPa | 41 bar

Certifications/Listings:

## Diverter Valve

SERIES 725S

[Download publication 08.41 for complete information](#)

- Intended for backfill and flush water diversion in backfill mining operations
- May be operated under pressure to dump backfill in the event of a blockage
- Stainless steel wetted surfaces
- Manual, hydraulic, pneumatic, and electric actuation available
- Available in 4–8" | DN100–DN200
- Pressures up to 1500 psi | 10342 kPa | 103 bar

## Hydraulic Control Valve

BERMAD 700 SERIES | VICTAULIC® SERIES 970

[Download publication Engineering 700](#)

for complete information

- Hydraulic control valves are devices capable of controlling variables such as pressure, flow, or level
- Optional configurations include: on/off, pressure reducing, pressure relief, pressure sustaining, and flow control (customized solutions can include combinations of the above functions)
- Sizes from 1½–48" | DN40–DN1200
- Pressures up to 400 psi | 2758 kPa | 28 bar
- Regional availability, contact [Victaulic](#) for details

## Outlet Fitting

No. 26

[Download publication 07.11 for complete information](#)

- An outlet fitting for any mechanical room application
- Sizes from  $\frac{3}{4}$ –12" | DN20–DN300 with Victaulic® OGS grooved ends,
- For AGS sizes 14–60" | DN350–DN1500, see pg. 36
- Pressure rating conforms to the rating of adjoining couplings
- Regional availability, contact [Victaulic](#) for details

## Vibration Isolation Air Handling Unit Drop

SERIES 385

[Download publication 102.15 for complete information](#)

- Provides hook-ups for isolation, straining, balancing and draining
- Swing joint solves misaligned coil challenges
- Single and double supply and return configurations
- Sizes from  $2 \times 2"$  through  $6 \times 4"$  | DN50×DN50 through DN150×DN100
- Pressures up to 300 psi | 2068 kPa | 21 bar
- Regional availability, contact [Victaulic](#) for details

## Inlet Vibration Isolation Pump Drop

- Includes flow control, vibration-controlling flexible couplings, access ports for gauges and thermowells, and an integral flanged or grooved end pump connection
- Sizes from 3–12" | DN80–DN300
- Rated to the working pressure of the ANSI Class 150, PN10/16, Australian Table E or JIS 10K flange connection
- Regional availability, contact [Victaulic](#) for details

Victaulic offers a comprehensive portfolio of Advanced Groove System (AGS) couplings for systems 14–78" | DN350–DN1950 and a full range of 14–60" | DN350–DN1500 AGS fittings, valves and accessories. Our large diameter piping solutions provide strength and dependability in addition to speed, making them an excellent choice over welding. Other advantages AGS joints provide over welded joints include no flame installation, superior seismic-shock resistance and a union at every joint for easy adjustment, system maintenance or system expansion.

## Victaulic® Bolted Split-Sleeve Products (VBSP)

Victaulic offers a variety of pipe joining solutions specifically designed to meet the needs of your system.

Conforming to AWWA C227, *Victaulic* Bolted Split-Sleeve couplings are available in a range of unrestrained and restrained flexible designs for use on carbon steel, stainless steel, HDPE and other pipe materials.

VBSP couplings are designed for use on water and wastewater transmission lines as well as hydroelectric penstock lines. VBSP couplings can also provide expansion and contraction capabilities when needed.

## Hole Cut System

Victaulic developed the hole cut piping system concept to enable a fast and easy mid-pipe outlet solution that would not require welding. The system allows for a direct branch connection at any location where a hole can be cut in the pipe. Gaskets are molded to conform to the outside diameter of the pipe and are pressure responsive to provide a seal. Victaulic® hole cut products are mounted to the pipe using either a locating collar (Style 920 and 920N) or a toe and heel (Style 923 and 924), and provide a smooth flow area.

## Plain End System for Carbon Steel

# QuickVic™ SD Installation-Ready™ System

The Victaulic® QuickVic™ SD Installation-Ready™ System is the most efficient and economical way to join carbon steel piping systems sized 2" | DN50 and down. It offers a significant total installed cost savings when compared to current pipe materials and installation methods used, including carbon steel thread or press and copper press or sweat. Available in sizes  $\frac{1}{2}$ "–2" | DN15–DN50, the products can be used on Schedules 10 through 80 carbon steel pipe and have a maximum working pressure and temperature rating of 300 psi | 2068 kPa | 21 bar and 250° F | 120° C (EPDM gasket).

## Plain End System

The *Victaulic* plain end piping method is ideal for maintenance and repairs, as well as new systems such as roof drains, slurries, tailings and oil field services.

*Victaulic* plain end couplings are primarily designed for use on standard weight steel pipe (Schedule 40) and may be used on light wall steel or other metallic pipe, such as aluminum or stainless steel. They are not intended for use on plastic pipe, plastic-coated pipe or brittle pipe, such as asbestos cement or cast iron, nor are they intended for use on pipe with a surface hardness greater than 150 Brinell.

## Advanced Groove System

Victaulic offers a comprehensive portfolio of Advanced Groove System (AGS) couplings and AGS fittings for systems 14–24" | DN350–DN600. Our large diameter piping solutions provide strength and dependability in addition to speed, making them an excellent choice over welding. Other advantages AGS joints provide over welded joints include no flame installation, superior seismic shock resistance, and a union at every joint for easy adjustment, system maintenance or system expansion.

## StrengThin™ System

The *Victaulic StrengThin™* system, ideally suited for high-pressure SWRO applications, delivers weld-like load carrying capabilities on thin wall stainless steel pipe. The system accommodates pressures up to 1200 psi | 8274 kPa | 83 bar, and is designed with duplex stainless steel to provide corrosion resistance. The system, consisting of couplings, fittings, and valves, is specifically designed for use on Victaulic's proprietary *StrengThin* groove profile, and is available in 2–20" | DN50–DN500.

## Potable Water System

Victaulic's potable water product offering centers around its next generation Grade "P" gasket with improved resistance to chlorine, chloramine and other typical potable water disinfectants. The Grade "P" gasket is UL Classified in accordance with ANSI/NSF 61 for cold +73°F | +23°C and hot +180°F | +82°C potable water service and ANSI/NSF 372.

## **Stainless Steel / Galvanized Carbon Steel**

These couplings utilize the Grade "P" gasket and shall be used on Schedules 10S and 40S stainless steel and Schedules 10 and 40 galvanized carbon steel potable water piping systems only, with an operating temperature of +0°F to +180°F | -18°C to +82°C.

## Copper

The Victaulic® grooved copper system offers a full line of couplings, fittings and valves for systems rated up to 300 psi | 2068 kPa | 21 bar, as well as a line of roll grooving tools for on-site grooving. The *Victaulic* grooved copper system is cold-formed, eliminating the need for soldering or brazing. The copper connection system joins 2–8" | 54.0–206.4 mm | DN50–DN200 of the following types of copper tube:

- CTS: Types K, L, M or DWV
- Australian Standard: Types A, B or D
- European EN 1057: R250

## CPVC/PVC

These couplings utilize the Grade "P" gasket and shall be used on Schedules 40 and 80 CPVC/PVC potable water piping systems only, with an operating temperature of +0°F to +180°F | -18°C to +82°C.

## Ductile Iron System

The Victaulic® grooved ductile iron piping system is the fastest and easiest method for joining ductile iron pipe with 75% fewer bolts than flanging. *Victaulic* grooved piping components are available for use on AWWA C-606 class 53 pipe or heavier, and have a pressure rating of up to 500 psi | 3447 kPa | 34 bar, with a size range from 3–36" | DN80–DN900. Flush-Seal™ gaskets are specifically designed to seal on ductile iron pipe surfaces providing a triple seal to promote leak-free service for the life of the system.
